Harri Aaltonen, Director of Start Racing Services answers Start Wax Questions

Including; Kick:

1. For what conditions do you recommend the kick Terva, Synthetic, RF, & Oslo line?
2. Start Pine Tar Grip Waxes have always intrigued me. I've always had tremendous luck with this product right at 0°C - in what is typically hairies conditions. What other conditions is this product line best suited for. Would a racer ever choose the tar grip waxes over the fluorinated product?
3. You have discontinued one of my favorite kick waxes, the MFW, why is this no longer made?
4. How is RF the replacement for MFW but is not include moly?
5. What is so special about the RF line. How can 4 waxes cover the entire temp spectrum?
6. When do you use BM Grip wax?

Glide:

1. For what conditions do you recommend the HF line, BM line and Nano N2, N4, N6?
2. What kind of snow does each Fluoro powder/Finishing Wax work in?
3. When would you use SF, SFR, BM Fluor, VS Nano?
4. Is n-nano always as fast or faster than SFR?
5. I have heard Start recs with finishing waxes used over another When? Why? How?
6. What are the practical differences between Moly and Graphite? How/when do you use HFG?
7. How different is the perfluoro between different brands?
8. Does Start recommend any of their liquids/gels to be used to cover kick for better speed?
9. What do you use to cover zero skis or hairies?
10. What are the secrets for glide in cold dry low humidity snow?
